Introduction

2011

The Weasler Engineering group is one of the world's leading manufacturers of PTO drive shafts and components for Agricultural and Lawn & Turf machinery. Weasler Engineering BV, based in Wijchen, The Netherlands, is a subsidiary of Weasler Engineering Inc. in West Bend, Wisconsin, USA.

Weasler Engineering's wide range of products feature the German-style shafts (lemon and star profile tubing); the Italian-style shafts (triangular profile tubing) and the North American-style (rectangular, square and splined shafting). Weasler offers the widest range of spare parts in the market with drive shafts ranging from 3 kW/4 HP up to 197 kW/264 HP. Weasler also offers high speed drive shafts (up to 3.600 rpm) as well as a broad range of high end gearboxes. Weasler supplies quality products to all major Original Equipment Manufacturers (OEMs) worldwide and is a market leader in North America for both production drive shafts and spare parts.

Years of experience, with a commitment to research and development, has allowed Weasler Engineering to develop the patented EASY LOCK safety guard as well as the patented fully enclosed wide angle guard and integral safety guard. With this product offering Weasler has proven itself as a manufacturer of user-friendly safety guards for PTO drive shafts. These safety guards have been tested and are CE approved to EN ISO 5674.

This catalogue does not include other Weasler innovations such as the 50° and 80° Wide Angle Constant Velocity PTO drive shafts with extended lubrication intervals up to 250 hours (application specific) and cam-type cut-out clutches. It does however include Auto-Lok yokes for easy hook-up of the driveline; friction clutches; "E" (Extended Lubrication) cross and bearing kits with lubrication intervals from 50 to 250 hours (application specific); and our 77 Series heavy duty PTO drive shafts.

Weasler Engineering offers a full range of aftermarket products to a worldwide network of distributors and agents. A wide range of products and marketing services are available to help increase effectiveness of repairs such as a user-friendly catalogue and marketing tools [including our unique Transparency Identification System (T.I.S.)].

All facilities in the Weasler Engineering group have an ISO 9001:2008 Registered Quality Management System. Weasler maintains a continuous focus on quality, safety and innovation and the Weasler brand stands for high quality, reliable and flexible service.

Please contact us if you would like further information about our products and the benefits Weasler Engineering can bring to your company.

This catalogue replaces all previously published information.

Quality fits. Every time.

Safety
Instructions

SAFETY INSTRUCTIONS

Safety Instructions

General:

It is not allowed to use the PTO drive shaft without guard, with a damaged guard or without using the restraining members correctly attached. A drive shaft guard restraining system is required in the European Union (EU) countries. Worn or damaged parts have to be replaced with compatible parts. Do not expose guarded parts of the shaft by cutting or enlarging the grease access holes. Do not step on or over a PTO drive shaft.

PTO drive shafts and (safety) clutches have to match the power take off and the machine type. See the instructions with your machine for recommended type and size of shaft and clutches. Overload can cause damage. Do not operate above recommended speeds.

It is not allowed to connect clutches to the tractor PTO shaft in the European Union (EU) countries. No device (e.g. adaptors) shall be installed between the tractor PTO shaft and the PTO drive shaft. No changes except the length adjustment may be made to the PTO drive shaft and its guard.

Symbols on guard:

Figure A: Always read the operator's manual!

Figure B: Do not open or remove safety guard while machine or PTO shaft is running!

Figure C: Assemble the PTO drive shaft with arrow (if marked on the guard) pointed to the tractor.

Coupling the PTO drive shaft:

Clean and grease the tractor PTO shaft and machine implement shaft (Figure D).

- A) QD-Pin: Press quick-disconnect pin and simultaneously slide the PTO drive shaft on the PTO shaft until the pin engages.
- B) Safety Slide Lok: Slide the tractor yoke partially on the tractor PTO shaft and then slide and hold the Safety Slide Lok collar rearward. Then slide the yoke on the tractor PTO shaft until the collar can be moved forward into the locked position.
- C) Auto-Lok: Slide the collar rearward until the collar locks in the rear position. Then slide the yoke on the tractor PTO shaft until the collar clicks into the locked position.

To avoid damage to the PTO drive shaft guard it may be necessary to remove the tractor drawbar for mounted and semi-mounted implements and the lower links secured in a suitable position for trailed machines.

Always check if the locks are securely engaged after coupling!

Figure D: Clean and grease

Safety Instructions

Restraining members:

A drive shaft guard restraining system is required in the European Union (EU) countries. If a chain is the method of restraining the drive shaft guard, the following must be taken into account: Chains must be securely attached to the master shield or the implement, in order to prevent the guard from rotating. Be careful to allow sufficient movement of the shaft in all working and transport positions (Figure E). Damaged chains need to be replaced immediately! Never use the chain to support the PTO drive shaft. If the PTO drive shaft is uncoupled from the tractor PTO shaft, or self-propelled machine, always connect the shaft to the support of the implement.

Figure E: Sufficient movement

Maintenance:

Before putting into operation, after any prolonged period of not using or after seasonal storage, inspect the shaft carefully. Lubricate the PTO shaft with high quality multi-purpose grease (see Chapter 'Greasing Recommendations'). Inspect the whole safety guard of the shaft, as well as the tractor master shield and the implement guard. If the PTO drive shaft guard does not rotate free from the PTO drive shaft, is damaged, or the safety signs are missing or illegible, parts must be repaired or replaced. Replacing or repairing has to be done by your dealer. Make sure the PTO drive shaft is stored in a manner which will not damage the drive line guard.

Check if the safety guard is complete and that there are no damaged parts.

Guarding:

After connecting the PTO drive shaft to the implement, always check for sufficient minimum overlap of 50 mm between the shield on the implement and the PTO drive shaft guard (see Figure F). Do not operate if the overlap is less than 50 mm!

Figure F: Overlap

Maximum working angles:

Standard joints:

- 25° at continuous operation.
- 45° at short duration.
- 90° at standstill.

Always ensure equal joint angles (Figure G). Disengage the PTO drive shaft if joint angles are too large or unequal. Check that the guard of the PTO drive shaft does not interfere with parts of the tractor or implement (e.g. drawbar master shield, tires). Decrease the maximum working angles in those conditions.

50° constant velocity joints*:

- 40° at continuous operation.
- 50° at short duration.
- 50° at standstill.

80° constant velocity joints*:

- 25° at continuous operation.
- 80° at short duration.
- 80° at standstill.

Figure G: Equal joint angles

* operating conditions must be reviewed by Weasler applications engineering

Safety Instructions

Figure H: P_u , L_z

Minimum and maximum length (profile tubes):

Try to obtain the greatest possible overlap on the profile tubes. In its working position, the PTO drive shaft must not be extended by more than half of the profile overlap (P_u) available when fully compressed L_z (Figure H). The minimum overlap should be at least 3 times the diameter of the inner profile tube.

Figure I: Mark guard tube

Minimum and maximum length (profile tubes):

To adjust the length on the profile tubes, place the half shaft next to each other in the shortest working position and mark them (Figure I). Shorten inner guard tube as marked, shorten outer guard tube 40 mm shorter than inner guard tube. Shorten inner and outer sliding profiles by the same length as the inner guard tube (Figure J). Round off all sharp edges and remove burrs (Figure K). Grease sliding profiles (Figure L).

Figure J: Shorten

Figure K: Round off

Figure L: Grease

Explanation connections:

QD: Quick Disconnect
 SSL: Safety Slide Lock
 QDSL: Quick Disconnect Spring Lock
 AL: Auto Lok
 CBI: Clampbolt Interfering
 CBN: Clampbolt Non-Interfering

Safety Instructions

Instructions for assembling and disassembling of Easy Lock guards:

1

Clean and grease bearing raceway before the bearing is placed in the groove.

2

Slide guard half over PTO drive shaft insert bearing tabs into the openings

3

Turn the bearing until it engages into the guard.

4

Push the Easy Lock clip into position. The bearing and guard are now secured. GUARD MUST ROTATE FREELY ON YOKES.

5

TO REMOVE GUARD - Use screwdriver to release Easy Lock clip. Turn the bearings to disengage from the guard and remove guard.

[illegible]

GREASING RECOMMENDATIONS

Greasing Recommendations

Be certain to follow greasing instructions as identified below* **.

Grease the PTO drive shaft with high quality multi-purpose grease every 8 shaft operating hours (unless otherwise specified on the guard). If access holes are available, grease the fittings through the access holes.

P-Kit: Standard Cross & Bearing Kit

E-Kit: Extended Lubrication Cross & Bearing Kit

Caution: replacement parts are not greased
Replacement parts must be greased at time of assembly and during use per the greasing recommendations.

*Constant high angle applications may require a greasing interval of 4 hours

**High speed applications may require a greasing interval of 8 hours

Greasing recommendations* standard PTO drive shaft with P-Kits:

* all greasing intervals are application dependent

** with coated profile tubes

Greasing recommendations* standard PTO drive shaft with E-kits:

* all greasing intervals are application dependent

** with coated profile tubes

Greasing Recommendations

Greasing recommendations* 80° European Style constant velocity PTO drive shaft with **P-Kits**:

* all greasing intervals are application dependent

Greasing recommendations* 80° European Style constant velocity PTO drive shaft with **E-kits**:

* all greasing intervals are application dependent

Greasing recommendations* 80° World Wide constant velocity PTO drive shaft with **P-Kits**:

* all greasing intervals are application dependent

Greasing Recommendations

Greasing recommendations* 80° World Wide constant velocity PTO drive shaft with **E-Kits**:

* all greasing intervals are application dependent

Greasing recommendations* 80° World Wide constant velocity PTO drive shaft with **Extended Lubrication**:

* all greasing intervals are application dependent

TRANSPARENCY IDENTIFICATION SYSTEM

The individual transparency cards will allow the user to easily identify PTO drive shaft components. Cross and Bearing Kits may be identified by the bearing cap outside diameter and the width of the cross. Yokes may be identified by the hole in the ear and profile. Tubes and shafts may be identified by the end sections.

How to use the Transparency Identification System:

1. Match the part to be replaced with the corresponding transparency card for identification.
2. Select the proper stock number for the replacement part.

PTO DRIVE SHAFT MARKING GAUGE

Tool for our customers to help identify Weasler PTO drive shaft series. By looking up the dimensions on the marking gauge, the customer will find the right Weasler series matching the dimensions of the part to be replaced. After that our customers can find the item numbers of the needed spare parts per series in the Weasler Aftermarket catalogue.

PTO drive shaft marking gauge

Item Number	Discription
12101040	PTO drive shaft marking gauge

Front:

The front view of the marking gauge features a ruler at the top with markings from 1 to 27. Below the ruler are several diagrams: a small hook-like component, a diagram labeled 'Italian system' showing a rectangular block, and a diagram showing a shaft with a yoke and dimensions. To the right of these diagrams is a large circular logo with a stylized 'W' and the text 'Weasler®'. Below the logo are three circular images: a collection of small parts, a cross-section of a shaft, and a yoke assembly. At the bottom right, there are three circular images showing different types of shaft ends.

Extended Lubrication Cross & Bearing Kit (E-Kit)

Item Number	Dim. "A" mm	Dim. "B" mm
201-7676	32.0	76.0

AW35 series

Inner Profile Yoke

Item Number	Dim. "A" mm	Dim. "B" mm
300-7639 (lemon)	39	
300-7651 (star)		51

Inner Tube

Item Number	Dim. "A" mm	Dim. "B" mm	Length m
620-3905-100	39.5 (5.0 Wall)		1.0
630-5100-100		51.0	1.0
620-3905-150	39.5 (5.0 Wall)		1.5
630-5100-150		51.0	1.5
620-3905-000	39.5 (5.0 Wall)		3.0
630-5100-000		51.0	3.0

Outer Tube

Item Number	Dim. "A" mm	Dim. "B" mm	Length m
620-4804-100	48.0 (4.0 Wall)		1.0
630-6104-100		61.0 (4.0 Wall)	1.0
620-4804-150	48.0 (4.0 Wall)		1.5
630-6104-150		61.0 (4.0 Wall)	1.5
620-4804-000	48.0 (4.0 Wall)		3.0
630-6104-000		61.0 (4.0 Wall)	3.0

Roll Pin

Item Number	Dim. "A" mm	Dim. "B" mm
508-1085	10	85

Outer Profile Yoke

Item Number	Dim. "A" mm	Dim. "B" mm
300-7648 (lemon)	48	
300-7661 (star)		61

Implement Yoke

Round Bore

With Keyway & Set Screw

Item Number	Dim. "A" Bore mm	Standard Keyway mm
800-7635	35	10
800-7640	40	12

Implement Yoke

Clamp Type

interfering

Item Number	Dim. "A" Bore
807-7606	1 3/8" x 6 Spl.

Implement Yoke

Round Bore

With Pin Hole

Item Number	Dim. "A" Bore mm
830-7635	35
830-7640	40

Implement Yoke

Clamp Type

interfering

With Keyway & Set Screw

Item Number	Dim. "A" Bore mm	Standard Keyway mm
847-7635	35	10
847-7640	40	12

AW35 series

Universal Joint

Item Number	Quick Disconnect Dim. "A" Bore	Profile Yoke Dim. "B / C" mm
3001-7606-00	1 3/8" x 6 Spl.	39 (inner, lemon)
3002-7606-00	1 3/8" x 6 Spl.	48 (outer, lemon)
3003-7606-00	1 3/8" x 6 Spl.	51 (inner, star)
3004-7606-00	1 3/8" x 6 Spl.	61 (outer, star)

Guard (incl. Bearing Kit)

Item Number	Compressed Length (Lz) center cross - center cross
904-3500-046	460mm
904-3500-051	510mm
904-3500-056	560mm
904-3500-061	610mm
904-3500-071	710mm
904-3500-076	760mm
904-3500-081	810mm
904-3500-086	860mm
904-3500-101	1010mm
904-3500-121	1210mm
904-3500-136	1360mm

Assembly instructions guard, see page 7

Easy Lock Replacement Kit

Item Number	
13001234	25-per Kit

PTO drive shaft

SAFETY CLUTCHES

Safety Clutches

OVERRUNNING CLUTCH

This clutch will prevent the machine from driving the tractor when the operation of the driveshaft has halted. The free running or overrunning direction is dependent on the drive direction of the PTO drive shaft.

An overrunning clutch with direction R will 'overrun' in the clockwise direction and an overrunning clutch with direction L will 'overrun' in the counter clockwise direction.

Any implement with a large rotating moment of inertia may need protection by allowing it to free wheel to a stop, independent of when the tractor PTO shaft is stopped.

Overrunning clutches will not absorb any energy, so inertia start-up peaks must be dampened by other means.

The clutch is most frequently used on high inertia machines like large square balers, mowers and wood chippers.

RATCHET CLUTCH

A ratchet clutch will operate as soon as the calibrated torque value is exceeded. During operation of the clutch, the torque is transmitted in pulses accompanied by an audible sound. The clutch will stop slipping when the transmitted torque drops below the calibrated torque value. It is recommended to lower the torque as soon as possible to prevent overheating and excessive wear.

The ratchet clutch allows implement overload protection with a unique pulsating torque during disengagement. The clutch slips in a pulsating manner when overload occurs, which aids in pushing the blockage through. Therefore, the operator may not need to leave the operator seat or even slow down to clear the blockage.

The clutch is most frequently used for baler pick-ups (built-in), combines (built-in), spreaders, rakes and tedders.

Safety Clutches

SHEAR BOLT CLUTCH

A shear bolt clutch will operate as soon as the shear torque of the bolt is exceeded. The shearing torque is influenced by the material of the bolt, the bolt size and the distance from the bolt centre to the clutch centre. When the shear torque has been exceeded, the bolt needs to be replaced to start operating again. It is very important to replace the exact same bolt type to guarantee safe operation of the clutch.

The shear bolt clutch offers simple, economical overload protection. The clutch disconnects the power source from the drivetrain when overload occurs. During disengagement, the design does not allow or generate damaging torque spikes or heat. After the operator replaces the easily accessible bolt, the machine can be restarted.

The clutch is most frequently used on machines where clutch activation is seldom observed like pick-ups (built-in), flywheel equipped machines (built-in) and stone crushers.

FRICION CLUTCH

A friction clutch will operate as soon as the calibrated torque value is being exceeded. During operation of the clutch, the torque is transmitted without pulses. The clutch will stop slipping when the transmitted torque drops below the calibrated torque value. It is recommended to activate the clutch before the start of every season. Minimum clutch operation prevents overheating and excessive wear of the friction discs.

The friction clutch is indispensable in certain agricultural implement applications. The friction clutch is the only torque limiter to continuously transmit power while overloaded. This is valuable during start up of high inertia machines, as well as for leveling out torsional fluctuations due to high cyclical loads. During operation the clutch transmits limited power.

The clutch is most frequently used on high inertia machines like large square balers and mowers.
