

Ratchet Clutch

Protect your equipment from damaging torque spikes

Depend on our ratchet clutch for implement overload protection. When the system becomes overloaded, the pulsating torque helps clear blockages, without operator intervention. Engineered and tested for high performance, our compact ratchet clutch handles your toughest operating conditions.

Features & Benefits

DESIGN

- Available in drive line or through-shaft configurations
- Disconnect torque settings range from 110 to 1,500 Nm
- Application speeds up to 700 rpm

PERFORMANCE

- Repeatable overload disconnect
- Audible indication of disconnect event alerts operator
- Torque transmits in pulses during overload to aid in blockage removal. No need for operator to slow or leave vehicle.
- Clutch automatically re-engages when transmitted torque drops below device's torque setting

Applications

- Balers
- Combines and combine headers
- Grain augers
- Fertilizer spreaders
- Hay rakes or tedders
- Mower conditioners

Commitment to Quality

Weasler ratchet clutches are specifically tested for disconnect torque, helping ensure reliable overload protection and increasing the productivity of the farmers who rely on the durability of your machines. Our consistent focus on quality, safety and continuous improvement means you receive the best products available.
